

HW5: Fun Extravaganza Bonus Possibility

Due Midnight, 3/24/17

This one is easy: repeat HW5 in a language other than Scheme.

It is expected that most languages will force you to approach these procedures differently than you would in Scheme. This is desirable.

In addition to code, you must write a short report explaining how the language you chose forced you to do things differently than in Scheme.

For example, statically typed languages would have difficulty with something like `run-cmd`. In this case, you might write about how you had to modify the problem to make it work with your language.

Provide a PDF document including the writeup, the source code and screenshots demonstrating the code in action.

Feel free to ask me for clarification. I am here to help!

Complicated bonus opportunity

Students that submit their assignment by the due date will receive some amount of bonus points on their 3/22 exam, calculated as follows:

$$\max(0, .15(HW6 - 20P))$$

Where P is the number of other students that used the same language as you, and $HW6$ is the grade you get on this assignment.
